Martha
Nature's Rainbow

Declan and Damien

Which vegetable or fruit will light the bulb challenge?

Dylan

My science experiment!

Abigail

I made Chocolate Brownies with a nice melted chocolate filling!

Information

How does the body work?

The endocrine system consists of eight major glands that secrete hormones into blood. These hormones, in turn, travel to different tissues and regulate various bodily functions such as metabolism, growth and sexual function.

example how it works

The Lymphatic system includes lymph nodes, lymph ducts and lymph vessels, and also plays a role in the body's defense.

Body Systems

Our bodies consist of a number of biological systems that carry out specific functions necessary for everyday living.

by Emilia

Information

The job of the Circulatory system is to move blood, nutrients, oxygen, carbon dioxide, and hormones around the body. It consists of the heart, blood vessels, arteries and veins.

The digestive system consists of a series of connected organs that together allow the body to break down food and absorb nutrients. It includes the mouth, esophagus, stomach, small intestine, large intestine, rectum and anus.
